

PROJECT MANAGEMENT DONE YOUR WAY

Daptiv Connect for JIRA

Work how you want and integrate what you need.

Business Challenge

- Organizations are constantly experimenting with how to best manage work, whether it's with waterfall, Agile, Kanban or a combination of multiple methods to deliver the right balance of control and collaboration.
- In a recent Changepoint survey, 69 percent of respondents said they use multiple methods to manage projects—from traditional to Agile.
- While Agile adoption is on the rise, traditional systems and processes that support fast, continuous planning and delivery continue to lag.
- Overreliance on manual reporting and a lack of real-time insight into projects and resources stands in the way of organizational agility.

Solution

Traditionally, PMOs must rely on a PPM framework that only supports a certain kind of execution model. But today, Daptiv PPM can manage multiple methods within the same portfolio. With Daptiv Connect, enterprises can manage their Agile process at the program and portfolio level. Daptiv Connect works with existing Agile work management tools like Atlassian JIRA, enabling better performance and ROI for your team's work efforts. Agile tool integration with Daptiv enables you to overcome the common roadblocks associated with Agile projects, such as lack of predictability, limited tracking of costs, and lack of visibility. Daptiv Connect for JIRA allows team members to book time directly against JIRA issues, and that time can be booked against capital and operating expense categories in Daptiv.

Product Description

Daptiv Connect is a cloud-based integration platform, powered by Dell-Boomi, that allows Daptiv PPM to connect to any application. Daptiv Connect for JIRA is designed for organizations that need a "single source of truth" from planning to execution to delivery. This integration seamlessly assimilates project data entered by teams using JIRA into the Daptiv PPM application. With data from JIRA integrated in real-time, project teams get to use their preferred tools for their Agile or iterative methodologies, while managers and executives can still derive the reporting and insights they need with Daptiv, a market leader in project portfolio management.

Use the Daptiv Connect platform to gain visibility from Agile, ERP, ITSM or other systems and still manage overall project and portfolio data in Daptiv PPM.

Key Features

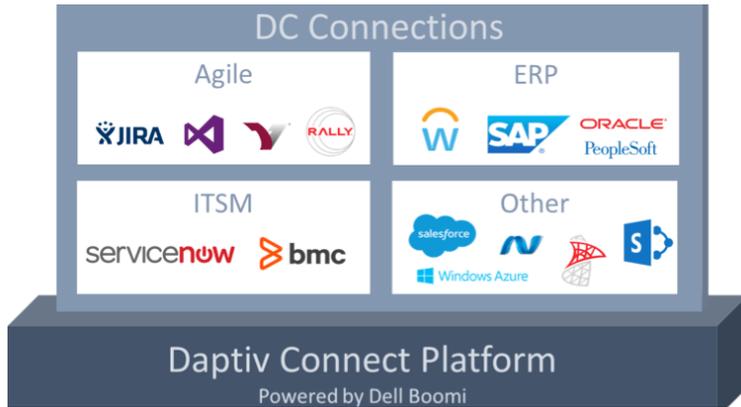

- A cloud-based integration platform that allows Daptiv PPM to connect to any application.
- Powered by Dell Boomi, a best-in-class enterprise integration platform as a service.
- Highly scalable, real-time processing.
- Cloud-based solution managed for you.
- Integrates disparate project data into the Daptiv PPM application.

Benefits

- Integration with different methodology tools eliminates multiple (and manual) data entry into the PPM system.
- Provides a clear view of both Agile and traditional project tasks and execution.
- Eliminates communication disconnects across departments and teams that use different project management methodologies.

Daptiv Connect for JIRA: What early adopters have to say

- “Our developers use JIRA extensively. Daptiv Connect for JIRA will help us with the time, tracking, reporting, and resource management while allowing them to keep using their tool of choice for Agile development.”
- “Daptiv Connect for JIRA will allow us to continue our use of JIRA for documentation and execution while connecting JIRA data directly to projects and reporting in Daptiv PPM.”
- “Daptiv Connect for JIRA will allow our developers to log time directly against JIRA issues and NOT have to double enter that time in Daptiv. It will also help us maintain governance and visibility across all of our projects in Daptiv.”

Work Flows with Workflows

Connections orchestrate data flow (source, schedule, business rules, data transformation).

- Faster, easier approvals.
- Automated workflow for approvals.
- Time isn't wasted searching for, following up and tracking down project-critical approvals.
- Avoid bottlenecks and delayed delivery.

Multi-Modal Project Management

Work the way you want to.

- Use the project execution method that works best for the situation, regardless of whether it's Agile, waterfall, or something in between.
- Automatically convert Agile data points related to percent complete into traditional hours-related data in Daptiv PPM.
- Optionally build a custom integration to fine-tune to your business by partnering with Daptiv's integration team.

The calculations are the same, the units of measure are not
For example, let's look at "percentage complete"

Traditional method

x = Tracked hours
y = Planned hours
 $(x / y) = \% \text{ complete}$

Agile method

a = Completed story points
b = Total story points
 $(a / b) = \% \text{ complete}$

Data Analysis

Gain powerful visibility into your project data.

- Share information with deep, two-way JIRA integration
- View project level, task level, aggregate task level, and issue level data.
- Analyze data at different levels for dynamic reporting and decision making.
- Integrate disparate project data into Daptiv PPM application (i.e. financials, resource, projects).
- Gain executive visibility into progress, time and costs through reports and dashboards.

Changepoint is a leading provider of project portfolio management (PPM), professional services automation (PSA), and enterprise architecture (EA) solutions. We help more than 1,000 global customers transform chaos into order with work management solutions that help teams prioritize initiatives and get the job done. Whether you're managing a portfolio of projects, engagements, or applications, Changepoint solutions help you realize benefits faster.
